**Subject:** RE: Access to Harvey GIS Data

Melody, below is how you can access all the data services we are publishing out.

Also we published out an inundation layer at the start of this, but we are using the flood extent from the Dartmouth observatory. It is a WMS services. I have put it up on ArcGIS Online, you can access it through ArcMap By clicking on this link and choosing open in desktop. -
https://epa.maps.arcgis.com/home/item.html?id=26aa69ceda9c4c4d995edf484fe337bd
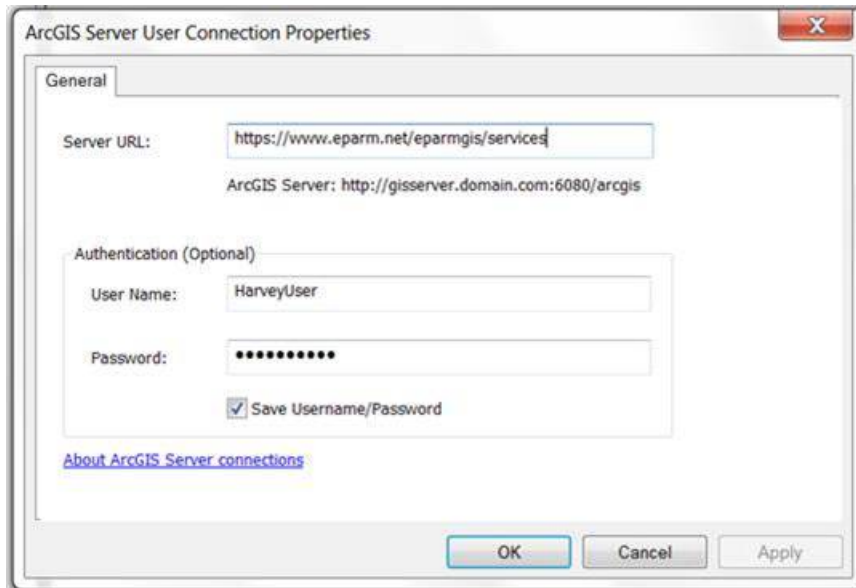

Here are the steps to access the GIS services in desktop that are fed to the viewer from us (Weston)

1. In ArcCatalog - Add an GIS Server with the option of Use GIS Services.
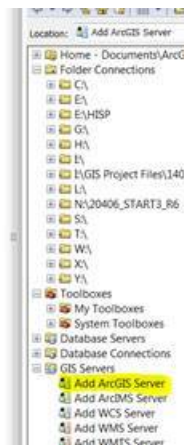

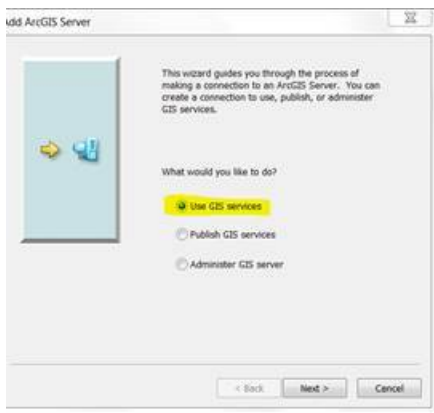

2. The Server URL will be - https://www.eparm.net/eparmgis/services
3. User Name – HarveyUser
4. Password - H@rvey2017

5. In arc catalog expand the eparmgis on www.eparm.net (user) and expand the R6Harvey folder
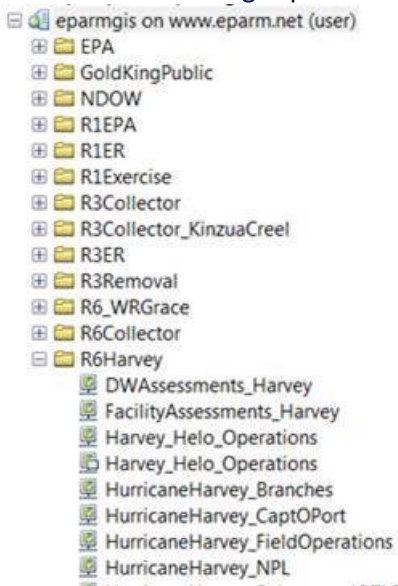

6. Add data as you normally would through the Add Data option. > Navigate to the ArcGIS Server connections > Find the Server > then drill down to the layer and Add.

If you want to know which one you are looking at in the viewer > next to the layers you will see three dashes > Click on that and choose Metadata. When you get prompted for a login use the Harvey User one above.

Again, thank you! Robby mentioned you were pulled into a long meeting yesterday, so I know it's really busy for you. We appreciate your help!
Melody

Morning Janine,
Do you think you'll have a chance today to send us the services or other layer info that Robby requested?
Thank you!
Melody

Melody,

Will do. I think those layers are all I need right now to do this analysis.

Thanks,
Robby

Janelle,
Will you send the services to Melody?
